Monoblock
With threaded connection
Models IBM2 and IBM3

Applications

- Oil and gas industry, chemical and petrochemical industries, power plants, shipbuilding
- For gaseous and liquid aggressive media that are highly viscous or crystallising, also in aggressive environments
- Test benches and calibration equipment
- Control panels (e. g. wellheads, actuators), lubrication systems, dry gas seal systems
- Sampling systems for process analysis

Special features

- Increased safety with metal enclosed valve seats and double valve body seal
- High-quality machining guarantees smooth operation with low torque and low wear
- Leak-tested tightness in accordance with BS 6755 / ISO 5208 leakage rate A
- Customisable arrangement with ball and needle valves
- Customer-specific combination of valves and instruments (hook-up) on request

Description

The monoblock has been designed specifically to fit into the small space of control panel and valve battery installations. With its very compact dimensions, the monoblock can be used in a wide range of applications providing high overpressure safety within a large spectrum of temperature ranges. The modular monoblock design allows using an arrangement of ball valves and/or needle valves in the same valve body.

For applications with liquid or dirty media, ball valves are recommended due to easy cleaning of the straight-through internal bore.

The valve seat design and the redundant seals of the valve body ensure high durability and tightness. In case the soft valve seat fails, the metal-to-metal seat will ensure that the valve can still be operated and set to a safe position. The tightness is guaranteed for the connection between the process and the measuring instrument and towards the atmosphere.

The super-finished machining of the internal parts allows a very smooth and precise operation, even at high pressures and after long periods without valve operation. The surface finish is also minimising corrosion with aggressive media and makes it easier to clean.

Specifications

Monoblock, models IBM2 and IBM3

Standards used

- EEMUA publication 182, specification for integral block-and-bleed valve manifolds
- ASME B16.34, valves - flanged, threaded and welding end
- ASME BPVC section VIII, rules for construction of pressure vessels division 1
- ASME B31.1, power piping
- ASME B31.3, process piping
- ISO 17292, metal ball valves for petroleum, petrochemical and allied industries
- MSS SP-99, valves for measuring instruments
- ASME B16.5, pipe flanges and flange fittings
- ASME B1.20.1, pipe threads, general purpose (inch)

Tests

- API 598, valve inspection and testing
- ISO 5208, pressure testing of metallic valves with leakage rate A
- MSS SP-61, pressure testing of valves
- DIN EN 12266-1, pressure tests, test procedures and acceptance criteria for industrial valves
- API607/API6FA/ISO 10497 fire test for valves

Material requirements

- NACE MR0175 / ISO 15156, use in H₂S-containing environments in oil and gas production
- NORSOK M-630, specification for use in pipelines (Norway)

Marking

ASME B16.34, valves - flanged, threaded and welding end

Pressure-temperature limits

The limits for operating pressure and temperature depend on the sealing material

Function

- Model IBM2: Block and bleed (shut off and vent)
- Model IBM3: Double block and bleed (2 x shut off and 1 x vent)

Arrangement

The shut-off valve(s) and the vent valve can be defined individually as ball valve or needle valve.

Connection (inlet/outlet)

- ½ NPT female
- ½ NPT male
- ¾ NPT female
- ¾ NPT male
- G ½ female
- G ½ male
- G ¾ female
- G ¾ male

Vent connection

½ NPT female or ¼ NPT female, plug screw is included in delivery, though not pre-fitted.

Options for ball valve

- Anti-tamper version with padlock
- Extended lever handle

Options for needle valve

- Anti-tamper version
- Anti-tamper key
- Anti-tamper version with padlock
- Extended lever handle

Order number: 81640006
The minimum design temperature is -54 °C [-65 °F]. For permanently low operating temperatures of ≤ -54 °C [≤ -65 °F], a special design is required.
